

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

CAROLINA JUNCO (*JUNCO HYEMALIS CARO-*
LINENSIS) IN VIRGINIA.

On the summit of the "Peaks of Otter," Virginia, 6000 feet altitude, the Carolina Junco is a common summer resident, breeding in abundance there. The birds disappear early in the fall. I visit the summit often during the summer and nearly always they are present.

JOHN W. DANIEL, JR., *Lynchburg, Va.*

BROWN HERON (*ARDEA BRUNNESCENS*) IN CUBA.

I found this rare heron fairly common on the San Juan River near Matanzas, Cuba, and after much stratagem and exposure, secured several specimens.

JOHN W. DANIEL, JR., *Lynchburg, Va.*

EDITORIAL.

As announced in the last BULLETIN, at least three issues of the next volume will be devoted to final reports of committees, each one constituting a "Special Bulletin" of twenty-four or more pages. An effort will be made to issue these quarterlies early in the month in which they would naturally appear, but from their special nature delays may occur. The editor hopes that in the event of delay you will not become impatient. The first of these reports will come from the Committee on Warbler Songs. The second from the Special Committee on Colaptes. The July issue will probably be devoted to General Notes, following the plan of the past few years. This number should be of unusual interest and value, being a summary of the work of the earlier part of the year. The fourth number will probably be a report upon special work on the Molt-
ing of birds, with special attention given to the details of molt in a few species. Considerable progress has already been made in this study, but many details remain to be carefully worked out.

In view of the special nature of the bulletins comprising the next volume, the price of the single numbers will be considerably increased,
